

DOORS & DOOR FRAMES

FROM MÜNSTERLAND

In 1904 Hermann Schwering founded a building company in Reken, Westphalia with an adjoining joinery workshop. Thanks to entrepreneurial spirit and dedicated employees, we are proud to say it has now become one of Germany's most significant door manufacturers. We are still producing internal doors and frames in the attractive resort of Reken in the heart of Münsterland, but now with over 200 employees and under the "ringo®" brand, a name which is well known in the trade. Over the years, this has been followed by other production sites in Germany.

Focus on the future

Be optimally equipped for the future and give your best every day. As a successful, owner-managed family business, this is the basis of our work, without which further objectives cannot be achieved. We are convinced of this. Our focus is therefore on the continual development of the brand and our production sites. We are a company with foresight, which employees and customers can rely on, one that is characterised today not only by the use of modern materials and techniques, but also by a very conscious use of all resources. In this way, we critically check every step of the work and during the use of materials, we ask ourselves whether we can become even better.

ringo® doors and frames carry the PEFC label

The PEFC is a transparent and independent system to ensure sustainable forestry management, and thus a sort of 'global forest MOT'. We need forests as an existential basis for plants, animals and people. It regulates our climate and provides recreational space for us. Forests are therefore also worth protecting with a view to future generations. The PEFC label is used by independent experts to inspect, document and improve forestry management.

We are taking part!

Businesses whose products or services bear a RAL quality mark, consider themselves as members of a community of shared values that aims to deal with its customers fairly and realistically. Its members therefore voluntarily submit themselves to the RAL QUALITY ASSURANCE. Customer-orientation and realistic business relationships play a central role for them, because in the RAL sense, 'quality' means more than just high quality of the product itself. It always goes beyond standards and legal requirements and covers all aspects that are important for the use of a product or service. These include economic efficiency, environmental sustainability and the competence of the staff.

As members of the VHI e.V. [Association of the German Wood-based Materials Industry], we are committed to sustainable construction via environmental product declarations (EPDs) at the IBU e.V., [Institute of Construction and the Environment].

Made in Germany
